“Reliable Technology Solutions For The Growing Company”

The worlds first 256 GB USB

Just released, the Kingston Technology DataTraveler 300 is the ultimate storage device for customers who want to have the best products available in the industry. Key features:

- 256 GB USB Flash drive
- Stores up to 10 Blu-ray, 54 DVD or 365 CD discs
- New Password Traveler software, - no administrator rights required allowing customers to easily access the secure partition on any system
- Fast transfer speeds - up to 20 MB/s read and 10 MB/s write

With such a hot product, it is understandable that availability is limited though we also have the option to supply on a built-to-order basis.

Offer your customers the biggest USB drive on the market by contacting your Kingston distributor or account manager now!

DataTraveler 300

World's first 256 GB USB Flash drive

Kingston's new DataTraveler® 300 USB Flash drive carries the highest capacity available on the market. Up to 90% of the drives content can be password protected and conveniently accessed due to the new Password Traveler software. No administrator rights are required. Fast transfer speeds guarantee smooth data flow to your host device.

JEDDAH RESOURCES SERVICES

IT Services

Leveraging on our team of expert hardware and software professionals, we offer effective repair and maintenance services of IT and electronic products. Our services are tailor made as per the requirements of clients and the error is identified in the computers and their accessories. We have established a well equipped service centre where the repair work is carried in effective manner. In addition, we also supply various hardware and software which are required in the corporate as well in household sector. Our services comprises of :

Computer Hardwares

We have capacious store where we keep stock of different types of computer hardware. Our procured products are of international quality and acknowledged for their high performance and technological advancements. We are engaged in to sale and purchase of different software hardware like RAM, disk, CD ROM, DVD, pen drives and many others as per the requirement of clients.

Printer Repair Services

Our professionals are well versed with the intricacies in the structure of the printers. They have adequate experience in repairing of various types of printers, viz. dot matrix, laser, drum, inkjet, plotters and others. The repairing is carried out at two levels depending on the fault in the printer. At the component level, we replace the rollers and toners if they are not functioning. Moreover, we also check the integrated circuit to ensure that the signals are properly transmitted.

Laptop Repair Services

We have expertise in repairing different brands of laptops. Our professionals check each component of the laptop to find out the flaw in them. They check the hard disks, mother board, RAM, CPU, processor, floppy drive, key board, battery re charger and other accessories to find out the problem. If required the hard disk and RAM is replaced to enhance the processing of the laptop. Our software professionals test the circuits and ensure that there is no error at the chip level.

Monitor Repair Services

Our professionals have adequate experience in tracing out the problems in the LCDs and monitors which hampers their performance. In case of LCD, the problem is generally minor, and when inspected thoroughly, the screen is changed. Repairing of LCD is less time taking process while monitor repairing is time consuming process. We repair different types of monitors irrespective of the models and brands. In the process, CRT, power supply, color registers are checked depending on the problems in the monitor.

Motherboard Repair Services

We repair the motherboards of different models like P1, P2, P3, P4, chipset board and others. In the process, the circuit is checked to ensure that there is no fault at IC level. Further, electronic components like resistors, chips and others are checked for the power supply. We carry out the repair of motherboard at our well equipped service center at Chandigarh, as proper testing equipment and facilities are required in repairing the motherboard.

PC Troubleshooting Services

We undertake the PC trouble shooting at different levels, viz. monitor, software, network and others. The problem is first identified and then step by step procedures are followed to find out the flaws in the specific component of the PC. If there is problem in power supply, the SMPS is checked and repaired. When there is problem in networking, the network is checked and the troubleshooting is started depending upon the malfunction. We check the RAM, antivirus and heavy files to solve the low performance related problems.
